A depression assessment is not part of OB Care. If the member has been assessed using a validated depression tool and depression is present, then indicate the tool using the Select Depression Tool drop down.

### **What if a person is not depressed - but they were assessed using a validated depression screening tool?**

If the person is not depressed, check the 'No' box in response to the 'Depression Present?' question. You can add notes to OB Care if you want to capture that person had an assessment using a validated screening tool and the results were negative. There are text fields in the Current Risks, Active Health Conditions and Notes tiles.

### **How do we capture that a screening was performed if the outcome was NOT depression present?**

As discussed in the answer to the previous question, you can add notes in the Current Risks, Active Health Conditions and Notes tiles if you want to capture that a screening was performed if the outcome was NOT depression present.
