Foreword

Today, unity is more important than ever – yet health literacy disparities create unequal access to navigate our health system, prevent U.S. from making informed health decisions, and leave U.S. feeling less empowered. Traditional health literacy solutions focus on doctor-patient interactions.

Yet, I challenge each of U.S. working in health care, regardless of setting, to step up and identify one specific action you can do to address the health literacy challenge. Health care consumers manage the majority of their health outside the doctor’s offices – so what can we do as pharmacists, nurses, insurers, researchers, policy makers, patient advocates, and pharmaceutical companies to positively impact change?

I believe the first step is to work together, a task that will have a much greater impact than working in silos. Regardless of our focus, we all share a common goal: to improve population health and health literacy – one consumer at a time. In my own work, I see the impact of collaboration – across my company, around the world, and with external partners. In a career highlight, a cross-functional global group positively impacted specific policy guidance in Europe to enhance and reflect numeracy, health literacy, user testing, and readability. As I have learned, change takes time and requires dedication and optimism in the face of setbacks - but it is possible.

Beyond our work, each of U.S. has struggled at one time or another to understand and use health information – because of emotion or illness, poor communication by a provider, cultural barriers, or a combination of all of these. Many of U.S. are caregivers, and because of our health care connection, we are called upon frequently for medical advice. How can we as friends, parents, daughters and sons, nieces and nephews, and grandchildren model health literacy in our own communications with loved ones? We must listen to each person’s unique story, meet them where they are, and work together to enable informed choice and decision making.

One person at a time, we must commit to making a difference. Health literacy is at its best when we embrace diverse views, work inclusively, and together tackle health literacy challenges.

It is easy to say that health literacy is a system issue, and that one person is unable to significantly impact the system. I challenge this notion – and commend you for taking the time to learn more by reading the Health Literacy & Plain Language Resource Guide, Second Edition. I believe if we all work together, we can make a positive impact.

Laurie Myers,
Global Health Literacy Director
Merck & Co., Inc.
How to Use this Guide

Welcome to Health Literacy Innovations’

This Guide is Divided into Three Sections:

1. Introduction:
   This section offers background information to help the readers understand the basics of literacy, health literacy, and plain language.

2. Health Literacy Resources:
   Up-to-date look at resources--guides, research documents, sample programs, technology and other information--gleaned from around the globe to help you to implement health literacy strategies.

3. Health literacy information with a unique focus that includes patient education for specific conditions, health literacy funding sources, videos, books and more.

The Guide Format:

- Most resources have a brief description that explains content.

- Each resource title is a link and it will take you to resource when you click on it.

- While we have made every effort to keep our resources fresh, things change rapidly. If a link doesn't work, please search for the reference’s title using your preferred search engine.

- We have made all efforts to include what is available, but if a resource is not included, please contact U.S. to include it in the next issue.

To contact Health Literacy Innovations go to:
info@HealthLiteracyInnovations.com
About the Health Literacy Advisor Software

The Health Literacy Advisor (HLA) is the nation’s first interactive health literacy software tool. As a powerful software tool, it helps to improve readability of documents using plain language principles.

The HLA helps users to:

Assess documents:
- Uses nine English and six Spanish electronic readability indices to score document grade level (the reading level).
- Highlights words that are hard-to-read and to understand.
- Flags long words and long sentences
- Uses the REDA-ReadsEasy Document Assessment™, a tool to evaluate the suitability of document (principles of plain language).

Edit documents:
- Suggests plain language alternatives to replace words that compromise clarity
- Includes a database of words and terms with medical, health insurance, and medication terms, among others.

Grade documents using accurate scores:
The HLA ignores:
- phone numbers
- URLs
- headings
- bullets

Save time:
- Stamps reading score results in the document
- Eliminates the need for Internet searches to find plain language alternatives
- Rewards writers for achieving their desired grade reading level or below with the ReadsEasy™ stamp on the document
- Provides an HLA “style guide,” that offers tips and tricks for ease and use of the HLA

The HLA was created for the health care industry, but works great on non-health documents, too.

or call 301-230-4966

Health Literacy Advisor™
A Word from the Author

We have come a long way to address health literacy. Today, more than ever, health literacy is getting the attention it needs.

There is more global awareness, activities, programs and initiatives, all of which are targeted to the diverse health care industry. More health professionals, government officials and community advocates are taking a claim in health literacy and making their mark. Research studies and protocols prove now more than ever that effective strategies can improve health literacy and patient engagement.

Yet, in spite of our progress, we are far from done. Constantly emerging technology, such as electronic health records and other new options may further confuse consumers. Multicultural and multilingual audiences continue to grow and present new challenges. The continued emphasis on consumer engagement and patient-centric health care puts even greater pressure and demands on the consumer.

Health Literacy Innovations’ Response:

Health Literacy Innovation is a privately-held company that creates tools to enhance health literacy. With more than a decade of experience serving the health care industry, we understand consumer needs and the health literacy challenges they face. We are committed to help professionals serve low health literacy consumers. Our dedication to health literacy is both broad and strong.

We are proud to share an updated version of the Health Literacy & Plain Language Resource Guide, Second Edition. We hope it will help users feel empowered to continue the crucial health literacy work. We trust this guide will help all health literacy champions access the wealth of resources available nationally and internationally.

We believe that if we improve our skills in health literacy, we can help consumers become healthier, be in better control of their health, prevent hospitalizations, or simply to help them understand their health care information.

We can think of no better investment for today’s health care consumers. And finally, great thanks to Aileen Kantor for her tireless health literacy and editorial review.

### About Health Literacy

**What is Health Literacy?**

There are many different definitions of health literacy. In following the rules of plain language, and in our very simplest terms, health literacy is:

> A consumer’s ability to find, read, evaluate, understand, communicate and use basic health information and services.

**Consumers have low health literacy when they:**

- do not understand what their doctor or health professional says
- have limited skills to read and comprehend instructions from doctors, medicine bottles, appointment slips
- cannot understand or complete health forms
- feel lost in the health care system that can be confusing and hard to navigate

**Who is Affected by Low Health Literacy?**

The U.S. 2003 National Assessment of Adult Literacy (NAAL), shows that limited health literacy affects some groups more than others, such as:

- the elderly
- those with limited education
- members of minority groups who do not speak English as their first language
- the poor
- the uninsured

**Still, even good readers may face low health literacy skills when they:**

- are unfamiliar with medical terms and how the body works
- are diagnosed with a serious disease and feel scared and confused
- have disabilities that make it hard to easily access the health care services
Low health literacy is an international challenge

Current research reveals:

- In the U.S. alone, **36% (close to 77 million)** adults have “low health literacy.”
- In Canada, **six in ten adults** do not have the skills needed to manage their health care well.
- In Europe, one study showed that:
  - **35% of all** respondents had low health literacy

Low health literacy is linked to:
- low quality of care
- high health care costs
- poor health outcomes
- increased health disparities

People with low health literacy are less able to:
- share health history, with providers
- use preventive services, such as early disease screenings
- manage a chronic health problem, such as diabetes or high blood pressure

Even worse, people with low health literacy:
- use more emergency services
- are hospitalized more
- are readmitted to the hospital over and over
- have a hard time understanding numbers, such as cholesterol and blood sugar levels, and medication amounts
- die earlier
What Has Been Done in Health Literacy so Far?

**We have come a long way**
Today there are implementation plans, guides, programs and initiatives. There is also research, that reveal the magnitude of low health literacy and how it affects populations around the globe.

**Current research data shows that health literacy depends on:**
- communication skills of consumers and professionals
- culture of the patient and health provider
- how the consumer interfaces with the complexity of their health care system
- demands of the situation, context and knowledge of health

We know now that skills of people with low health literacy are challenged by the complex health care system and the communications skills of providers.

---

**Many instruments had been developed**
There are many tools to measure health literacy. Yet, many of these instruments focus on the consumer—how people perform certain tasks by reading materials. Other instruments measure the consumer’s experience with the health care system.

But what most research neglects to measure is the really important stuff—the complexity of the system.

We need to put more emphasis on measuring:
- the communication skills of the health provider
- the ease or difficulty of using the health care system
- the ease or difficulty of consumer health information
- the effectiveness of policies and strategies

---

**Health Literacy Framework**

- **Eliminate Health Disparities**
- **Improve Healthcare Quality**
- **Demands, Complexity of the Healthcare System**
- **Improve Health Literacy of the Organization**
- **Improve Consumer Engagement**
- **Reduce Healthcare Cost**

**Health information and services must match the skills and abilities of consumers**

**Skills, Ability and Culture of Consumers**

**Proficient Health Literacy**

Responding to the Health Literacy Challenge

How Can Health Providers Respond to the Low Health Literacy Problem?

1. **Become aware of the problem:**
   - Learn about low health literacy as a serious and growing public health issue
   - Accept that low health literacy affects health care quality, safety, and equity

2. **Be a savvy health care provider and understand that low health literacy is invisible:**
   - Recognize the signs of low health literacy and look for a consumer who:
     - gives excuses to fill out forms, such as “I forgot my glasses”
     - does not follow treatment the right way
     - frequently misses appointments or does not return for care
     - fails to follow through with tests or referrals
     - has frequent hospitalizations

3. **Apply the health literacy universal precautions:**
   - Assume that all consumers have low literacy skills
   - Communicate in ways that anyone can understand:
     - Focus only on “need-to-know” and “need-to-do”
     - Use plain, non-medical language
     - Use the “Teach-Back” method
     - Demonstrate and show how things are done
     - Repeat information
     - Encourage questions

How Can Institutions Respond to Health Literacy?

Establish an organization that:
- has health literacy leadership and policies
- integrates health literacy into all activities
- implements health literacy policies and processes
- supports and trains staff to become health literate
- uses health literacy experts when developing materials
- uses state-of-the-art technology to evaluate materials
- incorporates health literacy in emergency or crisis events

Establish an organization that meets the needs of the population served:
- distribute print, audiovisual, and social media information consumers can understand and act on
- include consumers and community into planning, assessment, and evaluation
- provide easy access to services and navigation assistance
- communicate clear information about available health services and their costs
What Can We All Do to Improve Health Literacy?

Health literacy is not a new issue. Some health providers are making great progress to conquer low health literacy, while others are unaware of this issue. As a global health community, there is much more to be done.

**Become a health literacy champion in your organization:**
- raise awareness about health literacy
- communicate in ways that patients can understand
- facilitate access to easy-to-navigate health services
- create information that consumers can act on and follow through
- create a patient-centric environment that includes family engagement and shared decision making

**Health literacy champions need to work on health literacy to:**
- improve the quality and safety of care
- improve patient health outcomes
- reduce health care cost
- enhance consumer loyalty and trust
- remain up-to-date with patient-centered care
- enhance health equity

Health Literacy Change is Doable!

Our work is not a one-time thing, but continues now and into the future. It is our responsibility to make sure consumer abilities match the demands and complexity of the health care system. Only then are we helping consumers to achieve proficient health literacy.
About Plain Language

Plain language is a technique to write clear and to the point. It is also a strategy we can use to improve health literacy. In this section you will find plain language initiatives, articles, reports, tools and examples of organizations implementing programs in plain language.

“Writing Text to Reach Audiences with Lower Literacy Skills”
A guide that explains how to write text for audiences with lower literacy skills who often have difficulty making sense of materials that rely on written text.
• Source: www.thehealthcompass.org
Assessment Tools

A review of available tools and articles to help organizations measure their capacity to address health literacy, evaluate adult health literacy, and readability and suitability of health materials.

Health Literacy Advisor (HLA)

As an innovation in health literacy, the Health Literacy Advisor (HLA) streamlines the review process by combining nine (English), six (Spanish) electronic readability indices to assess document reading level. It also offers a powerful search-and-replace function to offer users plain language alternatives for word choices (by health or non-health words) that compromise clarity. It is the only software product on the market that “scrubs,” a document—ignores phone numbers, URLs, headings, and bullets—before it calculates readability, giving users an accurate readability score. The HLA also dutifully rewards writers for achieving their desired grade reading level by inserting a “ReadsEasy™” stamp within their document for a job well done.

Health Literacy and Technology

Software programs, applications, technology guides, articles and study reports to help you improve health literacy skills, health communication, materials and the consumer experience globally.

Health Literacy Advisor (HLA)
As an innovation in health literacy, the Health Literacy Advisor (HLA) combines nine English different electronic readability in English and six Spanish electronic readability indices in Spanish to assess document grade level (the reading level). It offers a powerful search and replace function to give users plain language alternatives, difficult-to-understand words that compromise clarity and flags long sentences. The HLA rewards writers for achieving a 6th grade reading level or below by inserting a “Reads Easy” stamp within their document for a job well done. To learn more about the HLA, please visit:

Our Believe Is That:
• If we can help communicators evaluate, standardize, and produce clear consumer information, we can help improve the nation’s health literacy challenge one word at a time.

Our Market:
• For more than a decade, we have been helping the health care industry simplify health materials so consumers can read, understand and act on their health care information.
• We invite you to join our diverse, interesting, savvy clients, who, word-by-word, are combating low health literacy.
